

MoodMe

Nicole Alejandro
@Nicole-A on GitHub

Description

MoodMe app allows users to track and visualize correlations between sleep patterns, foods consumed, and mood shifts throughout the day.

Features

- Registration/Log in
- User Profile
- Data visualization

Planning - User Stories

Users will be able to select hours of sleep, mood, food consumed and select different ways to visualize correlation between data.

Adding a Power Bi or Tableau integration will allow the user to select what data to correlate and how to display the data.

Ex. Sleep vs Mood displayed in linear graph.

Planning - Database

User table – Identity Asp.Net

Mood table

Food table

HoursOfSleep table

UserStates – ties mood, food, and hours of sleep to the user.

Technology Stack

- C#
- ASP.Net
- SQL Server
- Bootstrap

Demo

What I Learned

- ASP.Net (folder navigation)
- Identity
- Migrations can and will go wrong.
- Reverting to a previous commit.

What's Next

- Continue working on data structure / connection
- Integrate data visualization tool
- Learn more about ASP.Net and C#
